"CUSTOMER SATISFACTION AND TRANSFORM WITH MARKET REMAINS TO BE THE KEY ASPECT OF THE COMPANY SUCCESS. COMPANY HAS ACHIEVED GREAT HIGHEST AND CONTINUOUS TO DEVELOPS THROUGH ITS VOW TO CUSTOMER SATISFACTION."

ARUN PRAKASH.B
Proprietor, Sree Krishna Enterprises

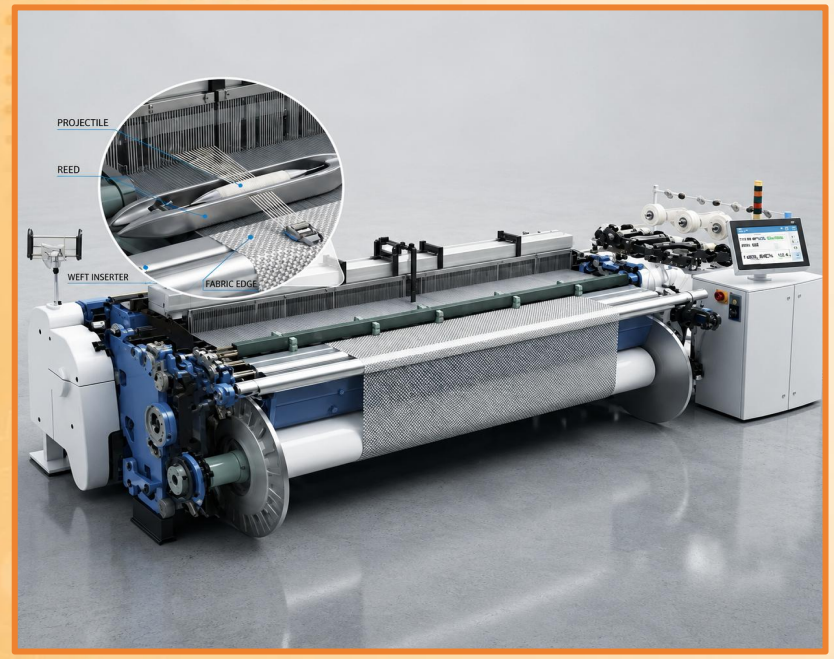

For a company dedicated to customer satisfaction & innovation we have exceeded our confines through textile machine.

The strong relationship with the supplier and royal customer is the pillar of the company which has urged us to expand our area of business to a different level. We source all the equipment required to manufacture textile products based on the client's requirement, even largely the spares for the equipment which keeps them running beyond their lifespan.

At Sree Krishna Enterprises we will continue to offer service to global textile by delivering the right and modern equipment to textile manufacture.....

Every machine is unique by its own, with various number of parts and joins which keeps them in motion. To find the same or equivalent parts for the machine is a back breaking process. Our job is to ease you of the pain. To make things simple we have categorised the weaving looms spares as below and sub categorised further.

PROJECTILE LOOM

The projectile loom is a unique weaving technology where Sulzer is the sole company to have successfully brought it to the commercial market.

Because manufacturing is held as a monopoly, acquiring original spare parts for these machines can be both expensive and time-consuming.

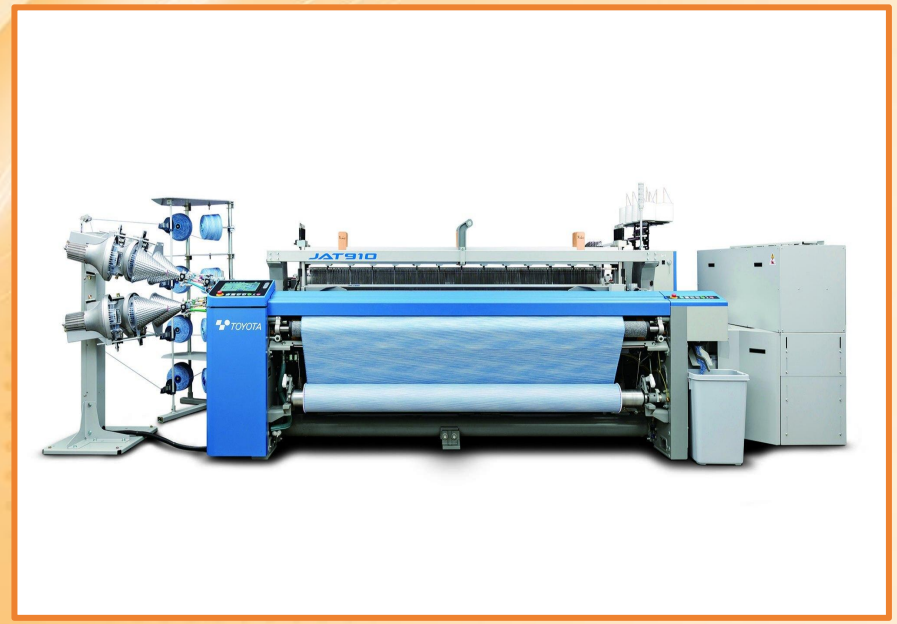

RAPIER LOOM

Rapier looms represent a major success within the textile weaving industry due to their cost-effectiveness and versatility in producing various patterns on a single machine.

Their widespread global usage has created high demand for replacement components, making the availability of spares crucial to preventing unexpected machinery downtime.

AIRJET LOOM

Airjet looms are the most modernized and expensive machine with greater running speed, which pushes all other textile industry to speed up its production level and modernize its line of action.Not too many textile companies have shifted to Airjet looms and the availability of its spares is scarce due to lower number of machinery in the market.

To obtain spares for the above type of machine directly from the manufacture results in number of paper work and makes the spare expensive. To cut the cost and relieve our clients of the pressure we have in store large number of spares waiting to be delivered. The spares and accessories in store for various type of looms namely,

- Projectile Sulzer
- Somat
- Vamatex
- Sulzer Rapier
- Nauova Pignona
- Saurer
- Dornier
- Muller
- Picanol Omni
- Toyota
- Tsudakoma

WEAVING

Our major concentration besides spares for textile machinery is weaving machines. Any machine with shuttle or shuttleless technology for manufacturing any type of woven fabric from fashion fabric to industrial fabrics we have the right machine for it. We are major dealer of the following weaving machinery.

PROJECTILE LOOMS

SULZER

- PS,
- TW11,
- PU, P7100, P7200

RAPIER LOOMS

PICONAL

- PGW,
- GTM,
- GTM AS,
- GAMMA 98,99,
- GAMMA 2000

SOMST

- SM92, 93
- THEMA 11 E
- EXCEL SUPER
- ST 800

VAMATEX

- C 401
- P 401
- P 1001
- LEONARDO

NAUOVA PIGONE

- TP 500
- TP 600
- FAST

DORNIER

- DORNIER I
- DORNIER II
- DORNIER III

SLUZER RAPIER

- G 6100
- G 6200
- G 6300

SAURER

SAURER 400

MULLER

- MBJ I
- MBJ II

AIRJET LOOMS

PICANOL

- OMNI PLUS
- OMNI PLUS 800

TOYOTA

- JAT 710

TSUDAKOMA

- ZAX 9100

The sizing machine condition is based on even sizing, thread tension and degree of drying. And the value of the machine is calculated on level of automation feature such as PLC, display technology, drives and switching devices.

We have experience and knowledge in evaluating sizing machine with varying factors and their location. Thus we supply our customer's right machine of their choice.

There are different types of warping machine available in the open market and people are easily deceived by the sellers who sell them for a great value than the product.

We eliminate the risk involved in purchasing such machine as we look into the key feature of the machine and their condition which we gained through experience and technology knowledge from manufacture of those machines.

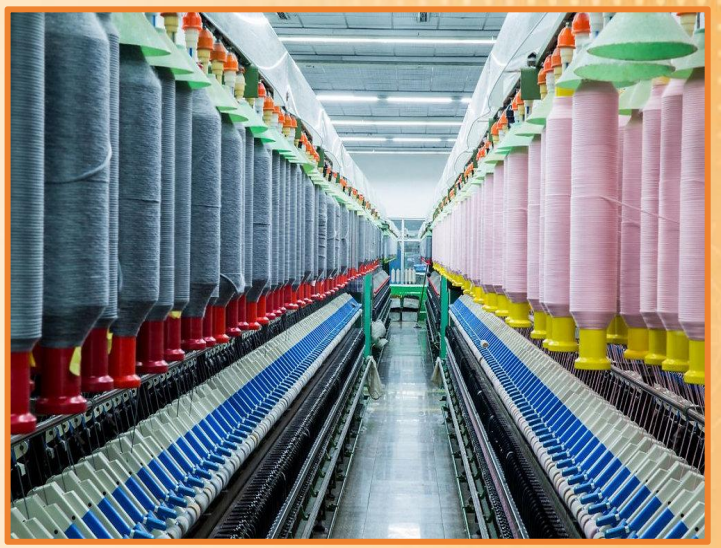

Therefore we look into the aspects of various machines in market and select top quality among them which is equivalent to the requirement of our client.

Spinning

www.skeindiaerd.com

The quality of the textile product is determined by the quality of the material used. The quality of the raw material is a natural phenomenon, but quality of the product is determined by various parameter where spinning plays a large part in it.

Spinning process being the initial stage determines the quality level of the final product. Even though our role in importing spinning machinery is trivial, we look for the best of the best around the global which can fulfil our clients need.

Spinning Testing Equipment

www.skeindiaerd.com

To ensure that the textile product is of high quality they need to be checked in the production line from time to time.

They need to measure its parameter in the initial stage using testing equipment and we deal with such equipment which ensure the basic parameter of yarn produced in spinning industries namely,

Mass variation tester
Tensile tester
Bundle fibre tester
Electronic wrap reel
Manual wrap block

At present customer satisfaction has become the key element to forge ahead in competitive global market. In our line of business to reach unreachable heights and to overcome our rivals the vital aspect is customer satisfaction. To achieve such level we consider every customer to be our first, providing them all the information up to our knowledge and see through the whole line of action.

We apart from trading textile spares and machineries, provide service to our customer in the process of loom erection with a team of experts who are aware of the product. Our experts do servicing of weaving machinery and electronic equipment on regular bases.

For a dobby machine you need an expert in the technology and should have an upto date knowledge on the machine and thorough understanding of the working principle behind the machine. Our team is formed by putting together these experts. We also train people to firm on the request from our customer.

We source and supply textile machinery spare parts from leading global brands, ensuring genuine quality, compatibility, and reliable supply for your textile weaving machinery requirements.

We have found over the years that as textile machinery suppliers it is very important to be able to supply spare parts for the machines we sell, so therefore we carry an extensive range of stock parts in our warehouse. we do this through long experience and specialization in the textile, industry and relationships developed over that time with many original manufacturres and suppliers to both firms. The spare parts have peerless performance and realible and guaranteed to increase life time of your investment.
SREE KRISHNA ENTERPRIZES is committed to offering reliable new and used auto looms of all types at the lowest possible prices from all corners of the globe. We also deal in importing of sectional warping machine and lend a hand to Spinning industry by importing spinning machinery based on the requirement of our client.
A testament to this is a large proportion of our sales comes from personal recommendations and repeated orders, For which we are proud of.
